## Day -9

### ❖ Day-9 : What we have learnt ?

- This session was also completely based on practical. In this session we learned how to get data from html form and print them in console as well as transfer them to another html page using “context” variable which is passed through render() which used to render template.
- Then we learned a bit about `{% csrf_token %}`. The CSRF token only ensures that only forms that have originated from trusted domains can be used to POST data back.
- Then lecturer made basic form with some fields and showed us how's that working in real life.

✧ **Task :-** Get data from user.

✧ **Output :-**
